### Results New

#### UCSF Radiology Orthopedic Institute X-Ray

MRN: 34987122  
Patient Name: **Armour, Theo**  
Date of Birth: **1/28/1947**

Requesting Physician: **Jonathan Lee Taylor**  
Accession Number: **10024131203**  
Exam Date: **03/04/2024**

Exam(s): **XR FOREARM 2 VIEWS, RIGHT**  
Exam Status: **Final**

The imaging provider, Daria Motamedi, MD, reviewed your images and created this report to communicate with your care team. Your care team may not have yet reviewed this report but will discuss these results with you at your next visit, through telephone, or MyChart messaging. If you do not have a visit scheduled and wish to schedule one, please reach out to your practice through MyChart or by calling the practice directly.

XR HAND 3+ VIEWS, RIGHT, WRIST RIGHT W SCAPHOID, XR FOREARM 2 VIEWS, RIGHT  
3/4/2024 3:17 PM

CLINICAL HISTORY provided by referring provider: eval thumb CMC please;

COMPARISON: None

#### IMPRESSION:

Chronic widening of the scapholunate interval related to underlying ligamentous injury.

No acute displaced scaphoid fracture, however there is persistent concern for scaphoid fracture, repeat radiographs in 10-14 days or MRI of the wrist can be obtained for a more sensitive evaluation.

Chronic fracture of the base of the ulnar styloid with cortical irregularity suggesting degenerative changes of the ulnar styloid and distal radioulnar joint.

Well-corticated ossification adjacent to the posterior olecranon, likely reflecting age-indeterminate but favored chronic triceps avulsion fracture at its insertion.

Severe degenerative changes with radial subluxation and exuberant proliferative changes of the thumb CMC joint. Moderate degenerative changes of the triscape joint.

Cyst versus erosions of the ulnar styloid and multiple carpal bones.

Mild soft tissue swelling about the wrist.
